Date: 2024-10-12

Remark:

1. *Reduction (%) = (The test result of Influent Challenge Concentration - The test result of Product Water Concentration) / The test result of Influent Challenge Concentration × 100%
2. **According to the request of the customer to reflect the reduction limit, the reduction limit is calculated based on the influent challenge concentration requirements and the limit value of the product water concentration in NSF/ANSI 58 standard. The calculation formula is that Reduction (%) = (target value of influent challenge concentration - limit value of product water concentration) / target value of influent challenge concentration × 100%
3. #Test items were carried out by SGS-CSTC Standards Technical Services Co., Ltd. Guangzhou Branch laboratory.
